- Catering available upon request

Cairo Systems, LLC is pleased to now offer their proven, high quality training in Linux+ Certification by CompTIA.

CompTIA, the Computing Technology Industry Association, has introduced the Linux+ certification to measure foundation-level Linux operating system proficiency as a reliable indicator of employee success for both professionals and employers.

CompTIA developed the Linux+ certification, which serves as a stepping stone towards higher-level Linux certification tracks from LPI, Sair, and Red Hat.

The Cairo Systems Linux+ Training Program focuses on the seven major objectives as outlined by CompTIA :

- Identification, Installation and Maintenance of System Hardware
- Administration
- Troubleshooting
- Configuration
- System Maintenance
- Installation
- Planning and Implementation

This course is aimed at Linux Professionals with six months of experience with the Linux operating system. It covers basic installation, operating, and troubleshooting services for the Linux operating system and hardware on workstations and servers. Basic system administration tasks are also covered.

In addition to high quality training each student is provided a practice test voucher from the Industry's de facto test provider, Transcender, for each course that they take with Cairo Systems.

For more information regarding the Linux+ training program, or other additional information technology training programs please contact 703-751-4902.
